

Quality and Environmental Management Policy

IDE Technologies Ltd. is committed to:

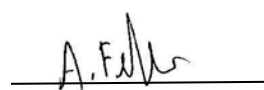

- Achieving and maintaining profitable growth while meeting the requirements and expectations of the company's customers, by the integration of environmental considerations in all its fields of activity.
- Positioning the company among the companies implementing products and services with maximum consideration for environmental aspects (a framework of regulations that will be detailed later).
- Maintaining a high level of quality by adopting a set of procedures and instructions that reflect the compliance of IDE Technologies Ltd. with present and future customer requirements, while taking the steps required to preserve the environment during all stages of the design, assembly, erection and service at customer sites (in the event that the assembly, erection and service are the company's responsibility).
- Producing eco-friendly desalination plants where the materials of construction are inertial without any effect on the environment, and utilize sources of energy with minimal pollution, as much as possible, in full compliance with the requirements of the customer or government body in whose jurisdiction the plants are installed.
- Meeting the requirements of external audits for a Quality Management System (QMS) and for an Environmental Management System (EMS).
- Meeting the requirements of the law wherever the company operates.
- Taking issues of quality of the environment into consideration in the company's aims and goals, directly and indirectly; to meet the customer's requirements with regard to all programs that have environmental impacts.
- The development and initiation of advanced technologies to bridge between desalination technologies and preservation of the environment.

All employees of IDE Technologies Ltd. are personally responsible for the quality of the work they perform, where the result is an ongoing process of constant improvement, including the issue of pollution prevention.

The company strives, and will continue to strive, towards its plants being designed and manufactured using advanced technologies, while adopting advanced environmental criteria with low environmental pollution, and while preserving the profitable aspects of the company, all within the framework of the requirements of, and contract signed with, the customer.

The QMS Manager, who also serves as the EMS Manager, reporting directly to the CEO, and the environmental quality officers in the various departments are responsible for the implementation of the policy, as well as the supervision, control, follow-up, reporting and ongoing operation of the system.

The company managers and employees are committed to constant improvement of company infrastructures relating to preservation of the environment, while understanding customer expectations to receive quality products and services.

Avshalom Felber
President and CEO, IDE Technologies Ltd.
